

October 3, 2023

Dear Veolia Customer,

Veolia regularly tests your drinking water for dozens of potential contaminants as required by federal and state law to ensure the safety of our public water system. Testing conducted on July 26, 2023, revealed the presence of perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS) just above the established regulatory standard of 10 parts per trillion (ppt).

However, granular activated carbon (GAC) treatment which targets PFAS contaminants has been installed and actively performing as of **August 15, 2023**, at the Veolia Forest Park-London Bridge drinking water facility in coordination with the Putnam County Department of Health.

To ensure the effectiveness of this treatment against PFAS contaminants, additional samples were collected on September 18, 2023, and results for PFOA and PFOS were both non detect, thus confirming treatment effectiveness.
